Insurance Approved, Smart, Flexible Key Control Solution.

We expertly install and manage the leading insurance approved key management solution.
ISS and Smart Box offers maximum flexibility, managing from 14 keys up to several thousand keys across your business. Using Keywin software, you can manage one cabinet or 100 cabinets in multiple locations using the same system.

ISS provide a fully managed service removing the investment in extra onsite server hardware, all software is hosted and supported on ISS servers in a secure UK datacentre. Tracking can be managed by a single administrator, or shared with other administrators.

Why Us?

You're in Control

You decide who can access each key. One or several keys can be taken at any time, using the intelligent smart control pegs. Pegs can be returned to any cabinet.

Full Reports & Logs

All events are registered in an event log, both from key cabinets and from KeyWin5. You choose what will be shown. The intelligent search function makes it easy to obtain information and produce reports.

Simple Administration

Users, groups and keys are simple and quick to register. You determine user and group access to keys by connecting them in the key management system. Every time a key is used it is registered, and a simple search enables you to find out who has had what key and when.

How It Works

Users can access the the cabinet by entering a personal code or via biometric fingerprint entry. The system will indicate which keys you have access to and you simply take out the keys you wish to use. If a key has already been removed, the convenient display will show you who has it. All Smart Box systems are fitted with a UPS-battery back-up. Track the keys online via ISS TrackBack servers.

Key Automotive
Clever Key Management & Tracking

Installed, Monitored and Maintained.

Not only will ISS expertly install your Smartbox to insurance approved standards we will look after your Smartbox for a small monthly or annual fixed cost.

The Smartbox incorporates the latest tracking technology that can track your vehicles between depots so you will always know where the key is located. To avoid you having to purchase and maintain your own on premises server, we will connect you to our secure and monitored fully managed datacentre servers. We will also provide you with dedicated telephone and remote access support for your Smartbox. We can also include an annual service of your equipment as an extra option to your maintenance agreement.
